

PRODUCT ROADMAP

Q4/2018

PRODUCT ROADMAP

The following pages show our roadmap for the next 2 quarters and provide a list of features as a **FORECAST**. Those features are candidates for being a part of the next iteration of the roadmap.

We commit ourselves to delivering all features assigned to a specific quarter in time – although details and provided designs may change upon release.

This document will be updated every quarter.

PRODUCT ROADMAP

Why only 2 quarters?

It's natural for requirements and priorities to change. We committed ourselves to agile development and need to stay flexible. We want to be able to react to changes in the market and to the needs of our customers.

Where is my feature?

The feature or improvement you are looking for is not listed here? This doesn't mean it's not going to be developed! This document only shows a selection of major features to come. See our user community for a more detailed view on our roadmap!

ROADMAP OVERVIEW

UPDATED QUARTERLY

Messenger app
(Release of the mobile app)

Launchpad 2.0

Teams
(O365 integration)

Employee app
(iOS and Android app)

Calendar
(O365 integration)

SharePoint / OneDrive
(O365 integration)

Auto translate

Search
(O365 integration)

Smart recommendations

Move & copy apps

Q4 / 18

Q1 / 19

FORECAST

CHANGES EXPLAINED

Page and workspace templates

This feature has been replaced in our roadmap by move and copy apps.

We postponed this feature in our earlier roadmap because we saw the need to investigate and analyze the requirements more thoroughly. As a result we saw that it would make more sense to implement the option to copy or move apps between pages and workspaces first as prerequisite. This will also already cover some of the basic requirements since admins can prepare apps in private pages or workspaces and then copy those into new ones.

LAUNCHPAD 2.0

We will provide several usability improvements for the launchpad based on your feedback: Many of you are using the launchpad like an app store for internal tools. We want to strengthen this use case and make it possible to easily manage and access your most important tools from COYO's launchpad - including your Office 365 applications.

Q4 2018

MESSENGER APP RELEASE

We will offer a Messenger App so beautiful and simple that our customers will prefer it over any other solution: This new native app for iOS and Android will be fully integrated into COYO and provides live communication as well as a digital address book with all colleagues.

Private BETA phase started in Q3, public BETA follows beginning of Q4. We will release the final app at the end of Q4.

Q4 2018

MICROSOFT TEAMS O365 INTEGRATION

Combine the best of both worlds: We will create a seamless bridge between COYO and Microsoft Teams. Users will get notified about any updates in COYO. A major goal is to open up Teams as another communication channel for COYO's publishers.

Q1 2019

FORECAST

- **Auto translate** **USABILITY**
Let COYO translate user generated content like timeline posts for you. Making it easier to give your international team a unified digital home.
- **Smart recommendations** **USABILITY**
COYO will be able to anticipate what information users are looking for and will give recommendations based on their social engagement. Get recommendations on blog or wiki articles for certain topics, interesting workspaces or new colleagues.
- **Search** **O365**
Apart from the usual results you will be able to find Office 365 documents in COYO's search.
- **Calendar** **O365**
Events in COYO can be connected with an Exchange server, so that those events will be visible in Outlook.
- **SharePoint & OneDrive** **O365**
A special documents app will display files from SharePoint or OneDrive. An additional widget gives moderators and admins the option to link to documents in SharePoint (e.g. to documents in specific groups). Users can attach SharePoint or OneDrive documents to posts and comments.
- **Move & copy apps** **USABILITY**
Move and copy apps between pages and workspaces to consolidate or split pages and workspaces. Also making it easier to prepare apps before releasing them to the public.

FORECAST

- Employee app **MOBILE**

We will create an Employee App for iOS and Android for getting everyone in the organization on board and giving them quick access to corporate news. Providing a seamless and easy login, push notifications and news.
